

Stoking STEAM

Check out The ElemMates website and Kids in Science Club to see why we're so up to start our own club chapter. No other club mixes up all the fun stuff into fun projects and activities. We're STEAMed: loving the ElemMate fantasy, the cool Science and technology, the wild arts and amazing social events we can organize.

Evie Sparks is us. We visit dazzling, jewel filled Atom City and our ElemMate friends as often as possible. We are all into connecting, working, playing and creating with them and on our own in KISC.

We dream up new ElemMates, and cook up all kinds of new stuff for them: home furnishings, fashion, transport, gadgets....everything. Then we share our ideas and projects in science, arts, and social action with our club mates in the real world and in postings to club mates on the website Gallery and Blogs.

In Kids In Science Club we gather together to work together. From small chapter projects big parties and events arise. We're Mad Scientists discovering the most amazing stuff about the world. Everyone's welcome. Grown ups help, advise us and even join us. We're elements bonding to create new and bigger things. We're ElemMates making sparks fly when we join in friendship. Our energy helps others in our community and solves world issues.

The Resource Button on the ElemMates KISC Page links to Media Kit documents for print and web: The Handbook with step by step directions for club formation and function, club forms and branded graphic materials.

With your help and support we can successfully organize Clubs, making more sparks fly. Go to www.ElemMates.com to find out.
